Acronyms

Term	Definition
Bid service fee	The charge a customer pays for each bid placed.
Bidder	A customer account in the mini-app.
Console	The staff-facing side of GuessLow, used to run the platform.
CSV	A plain spreadsheet file, used for exports and participant lists.
ETB / Br	Ethiopian Birr, the currency all amounts are shown in.
Maker-checker	A control requiring a second person to approve a change.
Mini-app	GuessLow as customers see it inside the super app.
Module	One area of the console, such as Auctions or Winners.
Re-auction	A fresh round of an auction that closed without a winner.
Role	A named set of permissions assigned to a staff account.
Settlement	Working out and publishing an auction result.
SMS	Short Message Service, used for customer notifications.

1. Introduction

1.1 Purpose

This manual explains how to run GuessLow from the operations console: creating and publishing auctions, following results, handling winners and payments, managing customers and staff, and configuring the platform.

1.2 Who This Manual Is For

Staff of Nib International Bank who operate, support or oversee GuessLow. Customers should refer to the GuessLow Customer User Manual.

1.3 How the Auction Works

GuessLow is a lowest unique bid auction. The winner is the participant holding the lowest amount that nobody else submitted. The lowest bid does not automatically win — only the lowest unique one does.

For example, if bids of 1.00, 2.00, 3.00 and 4.00 Br are received, and 1.00 and 3.00 were each chosen by two people, then only 2.00 and 4.00 are unique. The lower of those, 2.00 Br, wins.

Customers pay a bid service fee for every bid. The bid amount itself is only paid by the winner, in addition to the fee.

A rule that shapes the whole console. Bid amounts are hidden from everyone, staff included, until an auction has been settled. If the amounts were visible while an auction ran, anyone who could see them would know which amount would win.

1.4 What You Will See

The console groups its work into five areas in the left-hand menu. You only see the areas your role allows.

Group	Modules
Operations	Dashboard, Auctions, Bids, Winners, Payments
Catalog	Items, Categories, Content

Group	Modules
Customers	Bidders, Notifications
Governance	Approvals, Reports, Audit Logs
System	Users, Access Control, Settings

2. Signing In

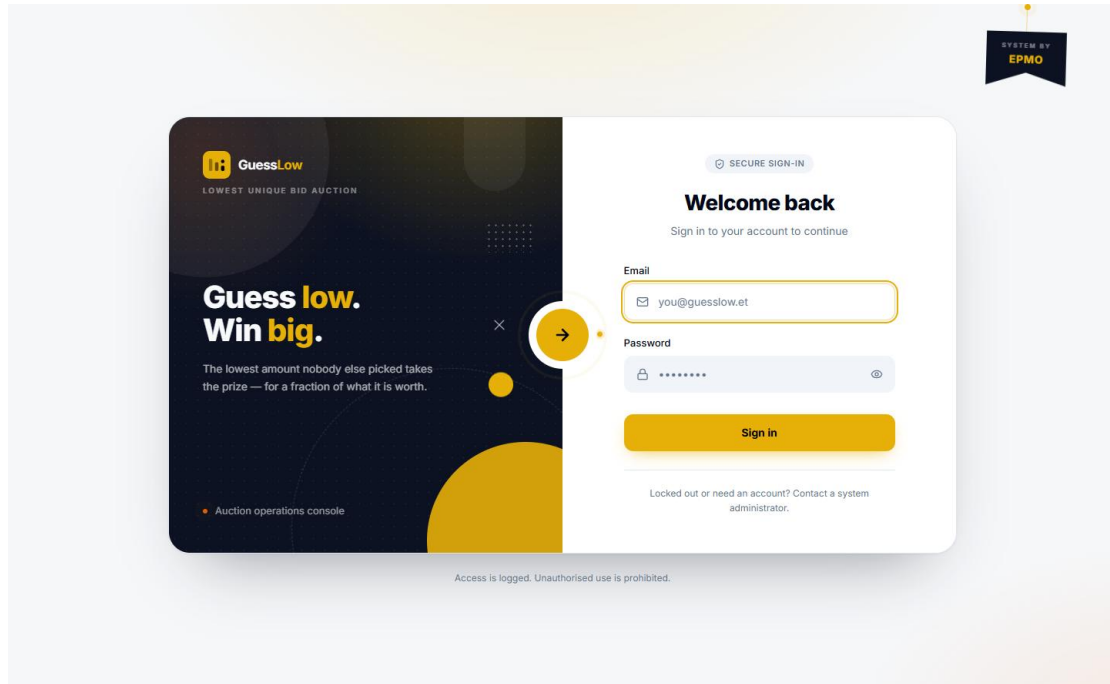

Figure 2.1: The console sign-in screen.

1. Open the console address in your browser.
2. Enter your work email address and your password.
3. Select Sign in.

A few points to be aware of:

- The message shown for a wrong password is the same as for an unknown email address. This is deliberate, so the form cannot be used to discover which accounts exist.
- Repeated failed attempts lock the account for a period set under Settings.
- A new account, or one that has been issued a one-time password, must set a real password before it can go anywhere else.

2.1 Changing Your Password

Use the Change password screen. If you have forgotten your password, ask a Super Admin to issue you a one-time password from the Users module.

3. The Dashboard

The dashboard is the daily starting point. It shows what is running, what has happened today, and what is waiting for a decision.

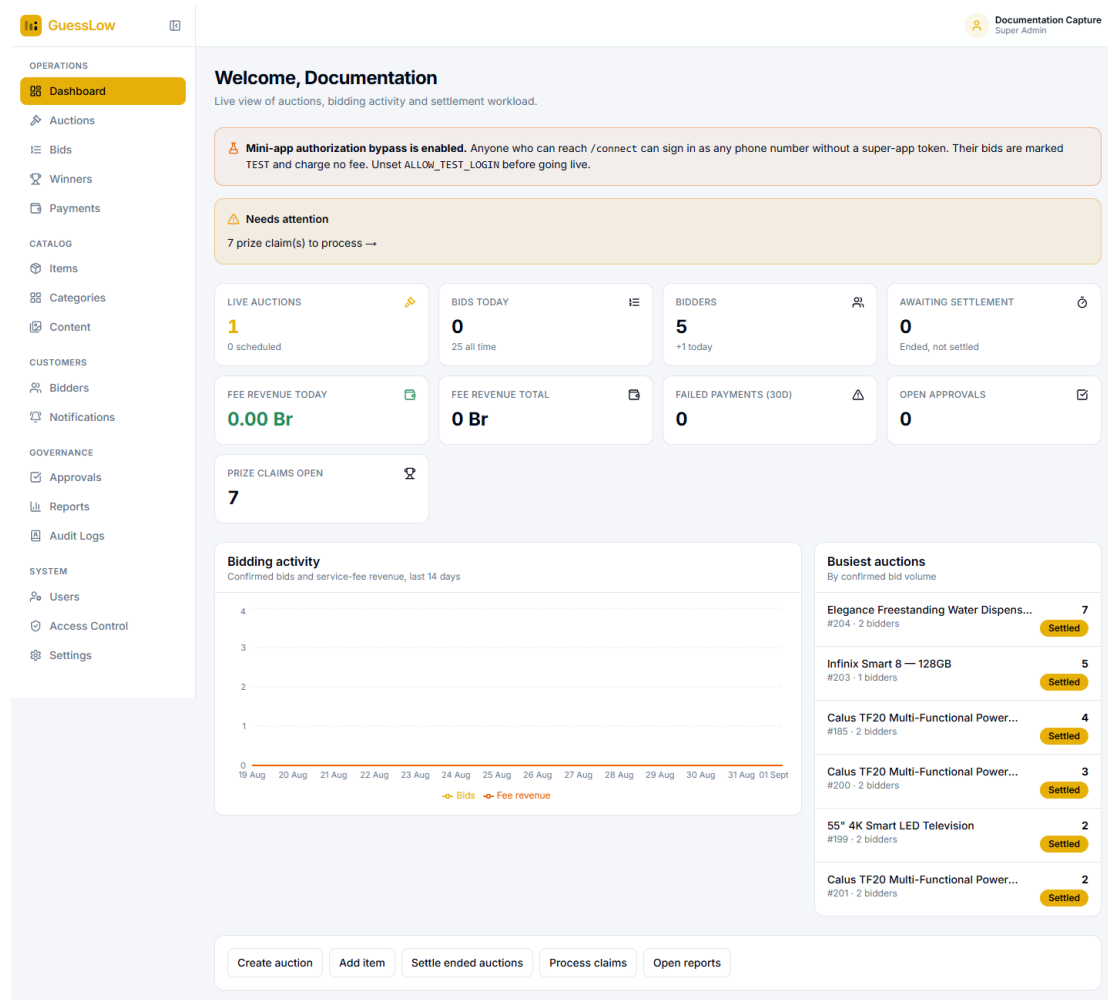

Figure 3.1: The dashboard. The work needing attention sits above the chart.

3.1 The Attention Band

A band directly under the title links straight to work that is waiting — in the example above, seven prize claims to process. Select it to go to the module concerned.

A second band appears when the mini-app sign-in bypass is switched on, warning that anyone who can reach the app can sign in as any phone number. This must be switched off before the platform is opened to the public.

3.2 The Tiles

Tile	What it tells you
Live auctions	How many auctions are running, and how many are scheduled to follow.
Bids today	Confirmed bids today, with the all-time total underneath.
Bidders	Registered customers, and how many joined today.
Awaiting settlement	Auctions that have ended but whose result has not been published.
Fee revenue today / total	Service fee income collected.
Failed payments (30d)	Fee collections that did not complete in the last 30 days.
Open approvals	Changes waiting for a second person to approve.
Prize claims open	Winners who have not yet completed a claim.

3.3 Charts and Shortcuts

Bidding activity charts confirmed bids and fee revenue over the last 14 days. Busiest auctions ranks auctions by confirmed bid volume. The buttons along the bottom jump to the common tasks: create an auction, add an item, settle ended auctions, process claims and open reports.

4. Auctions

An auction moves through the following states:

Status	Meaning
Draft	Created but not visible to customers.
Pending approval	Waiting for a second person to approve publication.
Scheduled	Published, but the start time has not been reached.
Live	Accepting bids.
Ended	Closed to bids, result not yet published. Amounts remain hidden.
Settled	Result worked out and published. Amounts are now visible.
Cancelled	Withdrawn. An auction that has been public is cancelled, never deleted.

Terms & conditions
GuessLow Auction Terms & Conditions (v1)

Sanity check
Possible amounts 99,999

Create draft

Bidding rules
Every value is per-auction and overrides the platform default.

Bid service fee (ETB) 30 Max bids per bidder 100

Max bids for the auction 0 Minimum bid amount 0.01

Maximum bid amount 999.99 Bid increment 0.01

Auto-extend window (minutes) 0
0 disables anti-sniping extension.

Re-auction
What happens when this auction closes without a valid winner. Every round inherits these rules, and bids a bidder already paid for carry into the next round free of charge.

Re-auction when there is no winner
Opens a fresh round automatically instead of closing the item unsold.

Participation
Who is allowed to bid. An open auction is the norm; a restricted one admits only the phone numbers you upload.

Invited participants only
Everyone still sees the auction in the app, but only the people on your list can place a bid.

Schedule
Times are in your local timezone.

Starts 09/02/2026 09:35 AM Ends 09/12/2026 09:35 AM

Figure 4.2: The New auction form. It saves as a draft — publishing is a separate step.

1. Go to Auctions and select New auction.

2. Under Item & presentation, choose the item from the catalogue. The English title fills in from the item; you can change it and add an Amharic title and a subtitle.
3. Under Bidding rules, set the bid service fee, the maximum bids per customer, the maximum bids for the auction as a whole, the lowest and highest bid amounts, and the increment.
4. Set the auto-extend window if you want late bids to push the closing time out. Enter 0 to switch it off.
5. Under Re-auction, decide whether the auction should be run again if it closes with no winner.
6. Under Participation, leave the auction open, or restrict it to an invited list of phone numbers.
7. Under Schedule, set the start and end times.
8. On the right, mark the auction as Featured if it should appear on the home screen, set the display order, and choose which version of the terms and conditions applies.
9. Read the Sanity check panel, then select Create draft.

Read the Sanity check before you publish. It reports how many different amounts the bid range and increment actually allow, and the number of bids needed to break even. A narrow range with many customers produces duplicates everywhere and auctions that end with no winner at all.

Bidding rules explained

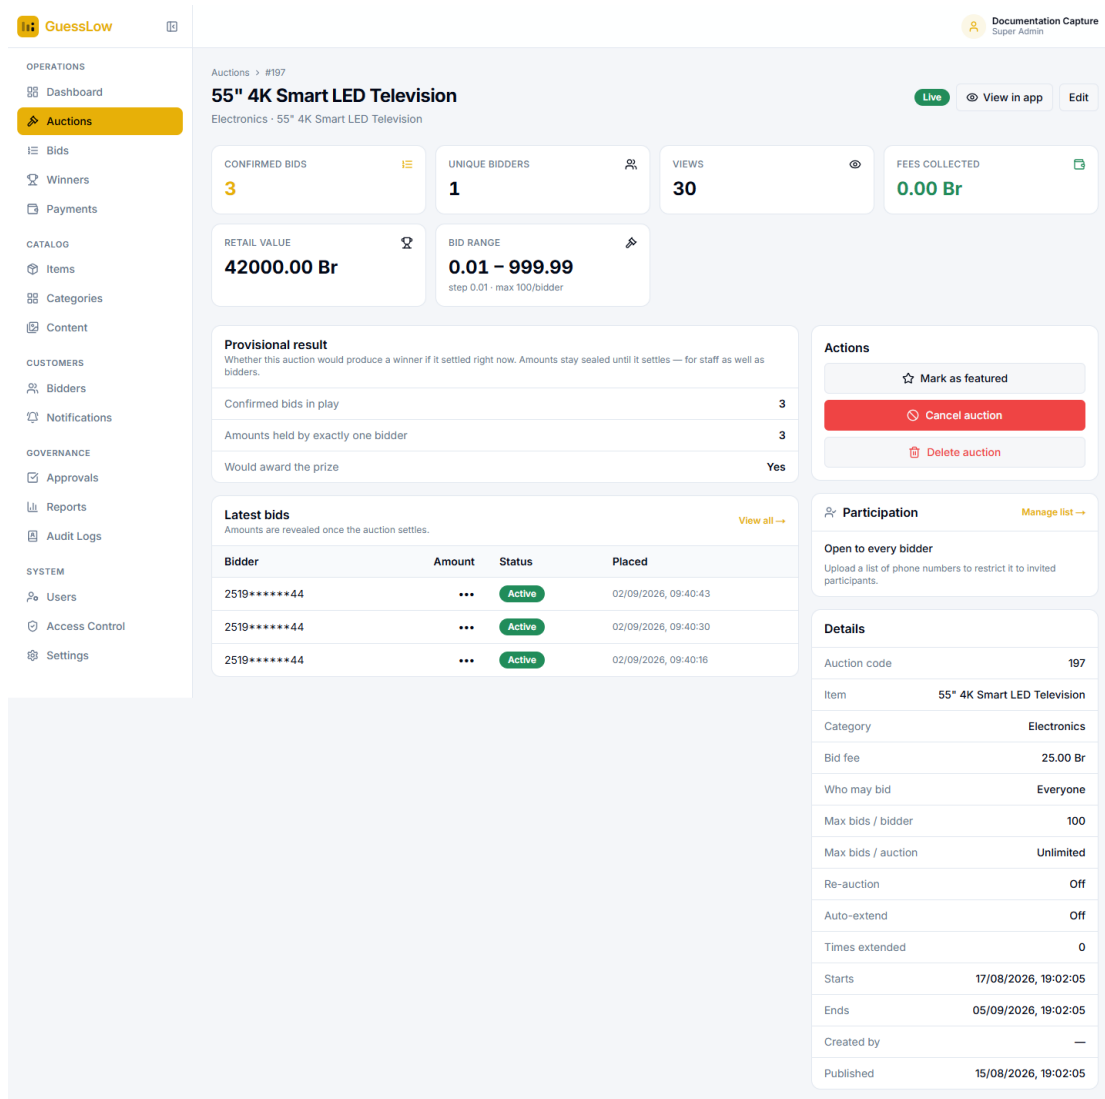

Field	What it does
Bid service fee	What each bid costs the customer.
Max bids per bidder	How many bids one customer may place on this auction.
Max bids for the auction	Bidding closes once this many bids have been placed by everyone combined. 0 means unlimited.
Minimum / maximum bid amount	The range customers may choose within.

Field	What it does
Bid increment	The step amounts must land on. With 0.01, an amount of 4.75 is valid and 4.752 is not.
Auto-extend window	A bid placed within this many minutes of the close pushes the closing time out by the same amount. 0 switches it off.

4.2 Publishing an Auction

A draft becomes visible to customers when it is published. If maker-checker is switched on for publishing, the auction moves to Pending approval and a second person must approve it from the Approvals module.

4.3 Watching a Live Auction

The screenshot shows the GuessLow interface for a live auction. The main header displays the auction title "55\" 4K Smart LED Television" and its category "Electronics - 55\" 4K Smart LED Television". The interface includes a sidebar with navigation options like Dashboard, Auctions, Bids, Winners, Payments, Catalog, Items, Categories, Content, Customers, Bidders, Notifications, Governance, Approvals, Reports, Audit Logs, System, Users, Access Control, and Settings. The main content area shows key statistics: Confirmed Bids (3), Unique Bidders (1), Views (30), and Fees Collected (0.00 Br). It also displays the Retail Value (42000.00 Br) and the Bid Range (0.01 - 999.99). A Provisional result panel indicates the auction's status, showing 3 confirmed bids in play, 3 amounts held by exactly one bidder, and a "Yes" for awarding the prize. The Latest bids table lists three active bids from user 2519*****44. The Actions panel includes options to Mark as featured, Cancel auction, and Delete auction. The Participation panel shows the auction is open to every bidder. The Details panel provides comprehensive information about the auction, including the auction code, item, category, bid fee, who may bid, max bids, re-auction status, auto-extend status, times extended, start and end dates, and the user who created and published the auction.

Figure 4.3: A live auction. Amounts are hidden, and the Provisional result panel reports the shape of the outcome without them.

The Provisional result panel answers the only question worth asking while an auction is running — would it produce a winner if it closed right now — without revealing the amounts:

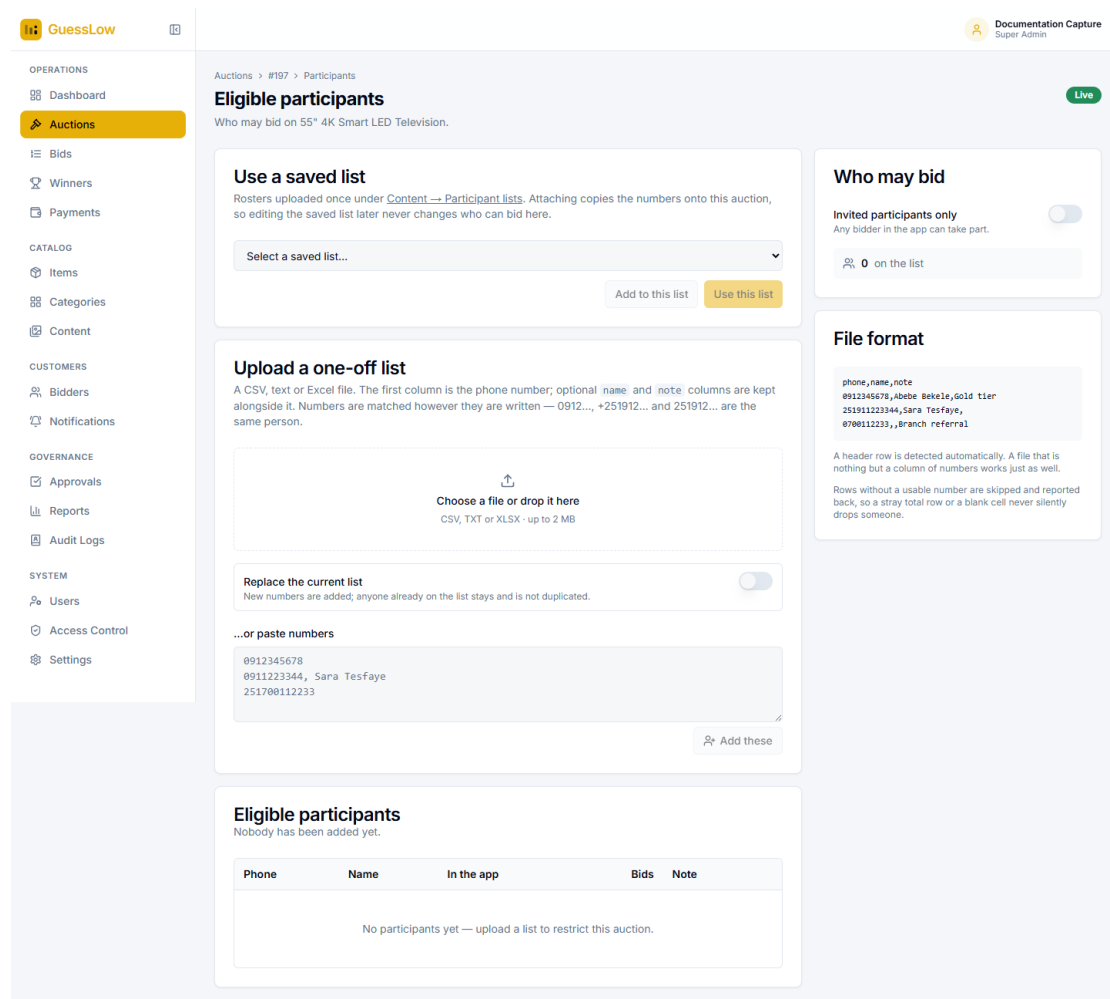

Row	Meaning
Confirmed bids in play	Bids whose fee has been collected.
Amounts held by exactly one bidder	How many amounts are currently unique.
Would award the prize	Whether a winner exists at this moment.

The Latest bids table below shows who bid and when, with the amount shown as dots. The Actions panel offers Mark as featured, Cancel auction and Delete auction. Participation shows whether the auction is open or restricted, and Details lists the full rule set.

Economics lock once bidding starts. The fee and the bid range cannot be changed after the first bid is placed. Changing them mid-auction would retroactively invalidate bids customers have already paid for.

4.4 Restricting Who May Bid

Open an auction and select Manage list in the Participation panel.

Eligible participants
Who may bid on 55" 4K Smart LED Television.

Use a saved list
Rosters uploaded once under [Content](#) → [Participant lists](#). Attaching copies the numbers onto this auction, so editing the saved list later never changes who can bid here.

Select a saved list...

Add to this list Use this list

Who may bid
Invited participants only
Any bidder in the app can take part.

0 on the list

File format

```
phone,name,note
0912345678,Abebe Bekele,Gold tier
251911223344,Sana Tesfaye,
0700112233,,Branch referral
```

A header row is detected automatically. A file that is nothing but a column of numbers works just as well.
Rows without a usable number are skipped and reported back, so a stray total row or a blank cell never silently drops someone.

Upload a one-off list
A CSV, text or Excel file. The first column is the phone number; optional **name** and **note** columns are kept alongside it. Numbers are matched however they are written — 0912..., +251912... and 251912... are the same person.

Choose a file or drop it here
CSV, TXT or XLSX - up to 2 MB

Replace the current list
New numbers are added; anyone already on the list stays and is not duplicated.

...or paste numbers

```
0912345678
0911223344, Sana Tesfaye
251700112233
```

Add these

Eligible participants
Nobody has been added yet.

Phone	Name	In the app	Bids	Note
No participants yet — upload a list to restrict this auction.				

Figure 4.4: Eligible participants — three ways to say who may bid on an auction.

Using a saved list

Lists uploaded once under Content → Participant lists appear in the picker. Add to this list appends them; Use this list replaces what is there.

Attaching a list copies it. Editing the saved list afterwards never changes who can bid on this auction — which is what you want, because eligibility on a running auction should not change under customers' feet.

Uploading a one-off list

1. Prepare a CSV, TXT or XLSX file of up to 2 MB. The first column is the phone number; optional name and note columns are kept alongside it.
2. Drop the file onto the upload area, or select it with the file picker.
3. Leave Replace the current list switched off to add to the existing list, or switch it on to start again.
4. Switch on Invited participants only in the Who may bid panel. Until you do, the list is stored but the auction stays open to everyone.

Numbers are matched however they are written — 0912..., +251912... and 251912... are treated as the same person. Rows without a usable number are skipped and reported back, so a stray total row or a blank cell never silently drops someone. You can also paste numbers straight into the box, one per line.

4.5 Settling an Auction and Publishing the Result

When an auction ends, GuessLow works out the result automatically after the grace period set under Settings, and publishes it. An operator can also settle an auction by hand from the auction page.

Settlement takes every bid whose fee has been confirmed, groups the bids by amount, keeps the amounts held by exactly one customer, and ranks those from lowest upwards. Rank 1 wins. A winner record is created with a claim deadline, and the auction moves to Settled.

Published	15/08/2026, 22:04:10

Figure 4.5: A settled auction. The result table is now fully open — rank, bidder, amount and outcome.

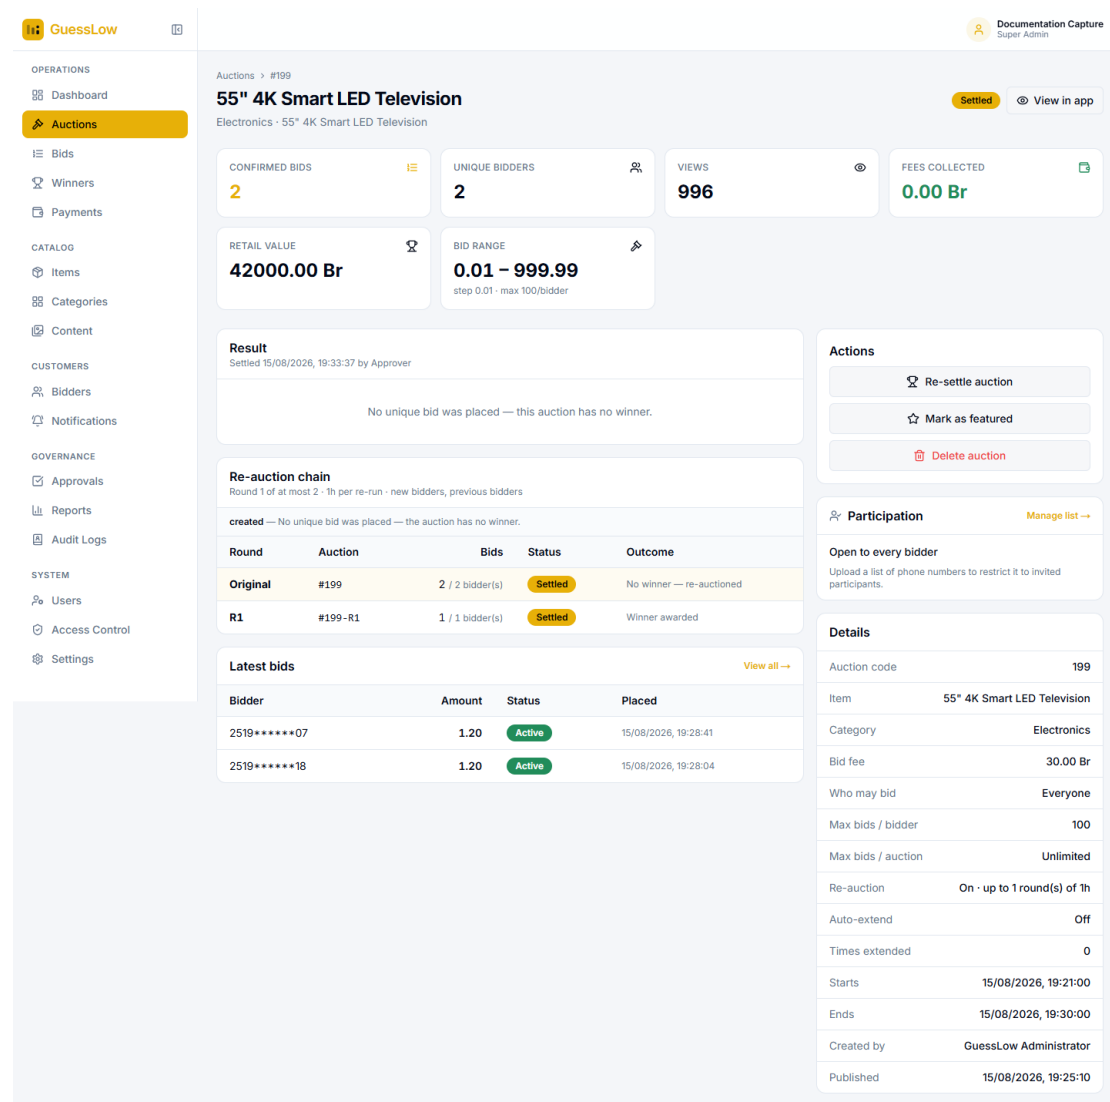

The Actions panel now offers:

- Re-settle auction — discards the published result and works it out again. Use this after a dispute.
- Open re-auction round — starts the next round by hand.
- Mark as featured and Delete auction.

Settling and re-settling can both be routed through maker-checker, so that a second person must approve them.

4.6 When an Auction Has No Winner

An auction closes without a winner when no amount was chosen by exactly one person, or when fewer bids were received than the minimum you set for a valid result. The item is not awarded.

The screenshot displays the GuessLow Auction Management interface for Auction #199, titled "55\" 4K Smart LED Television". The interface is divided into several sections:

- Summary Cards:**
 - CONFIRMED BIDS: 2
 - UNIQUE BIDDERS: 2
 - VIEWS: 996
 - FEES COLLECTED: 0.00 Br
 - RETAIL VALUE: 42000.00 Br
 - BID RANGE: 0.01 – 999.99 (step 0.01 · max 100/bidder)
- Result:** Settled 15/08/2026, 19:33:37 by Approver. Message: "No unique bid was placed — this auction has no winner."
- Re-auction chain:** Round 1 of at most 2 · 1h per re-run · new bidders, previous bidders. Message: "created — No unique bid was placed — the auction has no winner."

Round	Auction	Bids	Status	Outcome
Original	#199	2 / 2 bidder(s)	Settled	No winner — re-auctioned
R1	#199-R1	1 / 1 bidder(s)	Settled	Winner awarded
- Latest bids:**

Bidder	Amount	Status	Placed
2519*****07	1.20	Active	15/08/2026, 19:28:41
2519*****18	1.20	Active	15/08/2026, 19:28:04
- Actions:** Re-settle auction, Mark as featured, Delete auction.
- Participation:** Open to every bidder. Upload a list of phone numbers to restrict it to invited participants.
- Details:**
 - Auction code: 199
 - Item: 55\" 4K Smart LED Television
 - Category: Electronics
 - Bid fee: 30.00 Br
 - Who may bid: Everyone
 - Max bids / bidder: 100
 - Max bids / auction: Unlimited
 - Re-auction: On · up to 1 round(s) of 1h
 - Auto-extend: Off
 - Times extended: 0
 - Starts: 15/08/2026, 19:21:00
 - Ends: 15/08/2026, 19:30:00
 - Created by: GuessLow Administrator
 - Published: 15/08/2026, 19:25:10

Figure 4.6: Auction #199 closed with no winner because both customers bid 1.20 Br. The re-auction chain shows the round that resolved it.

This example contains the whole rule. The auction took two confirmed bids and both were 1.20 Br, so no amount was unique and the result panel reads "No unique bid was placed — this auction has no winner."

The Re-auction chain panel below shows what happened next:

Round	Auction	Bids	Status	Outcome
Original	#199	2 / 2 bidders	Settled	No winner — re-auctioned
R1	#199-R1	1 / 1 bidder	Settled	Winner awarded

The line above the table states the rules of the chain — how many rounds are allowed, how long each runs, and who may take part — so you can see at a glance what remains.

4.7 Re-Auctions and Carried-Forward Bids

A re-auction is a fresh auction for the same item, linked to the original and carrying a code that extends it: 199 becomes 199-R1, then 199-R2.

Nobody pays twice. Every bid a customer has already paid for anywhere in the chain becomes a free bid in the new round. If they paid for 5 bids and place 8 in the re-run, 5 are free and 3 are charged. Across the whole chain a customer only ever pays for the largest single round they played.

Everyone from the previous round is notified when a new round opens — that the auction is being re-run, how many paid bids came with them, and from which bid a fee starts again. Customers excluded from a round are told that instead.

Whether rounds open and publish by themselves is set under Settings → Re-Auction. With automatic creation switched off, the auction is flagged as pending and an operator opens the next round from the auction page.

Calus TF20 Multi-Functional Power Bank & Wireless Headset — Accessories (4500.00 ETB)

Title (English)

Calus TF20 Multi-Functional Power Bank & Wireless Headset

Title (Amharic)

Optional

Subtitle

Short line under the title

Bidding rules

Every value is per-auction and overrides the platform default.

Bid service fee (ETB)	Max bids per bidder
30	100
Max bids for the auction	Minimum bid amount
0	0.01
Bidding closes once this many bids have been placed by everyone combined. 0 means unlimited.	
Maximum bid amount	Bid increment
999.99	0.01
Auto-extend window (minutes)	
0	
0 disables anti-sniping extension.	

Re-auction

What happens when this auction closes without a valid winner. Every round inherits these rules, and bids a bidder already paid for carry into the next round free of charge.

Re-auction when there is no winner

Opens a fresh round automatically instead of closing the item unsold.

Schedule

Times are in your local timezone.

Starts	Ends
08/15/2026 07:18 PM	08/25/2026 07:18 PM

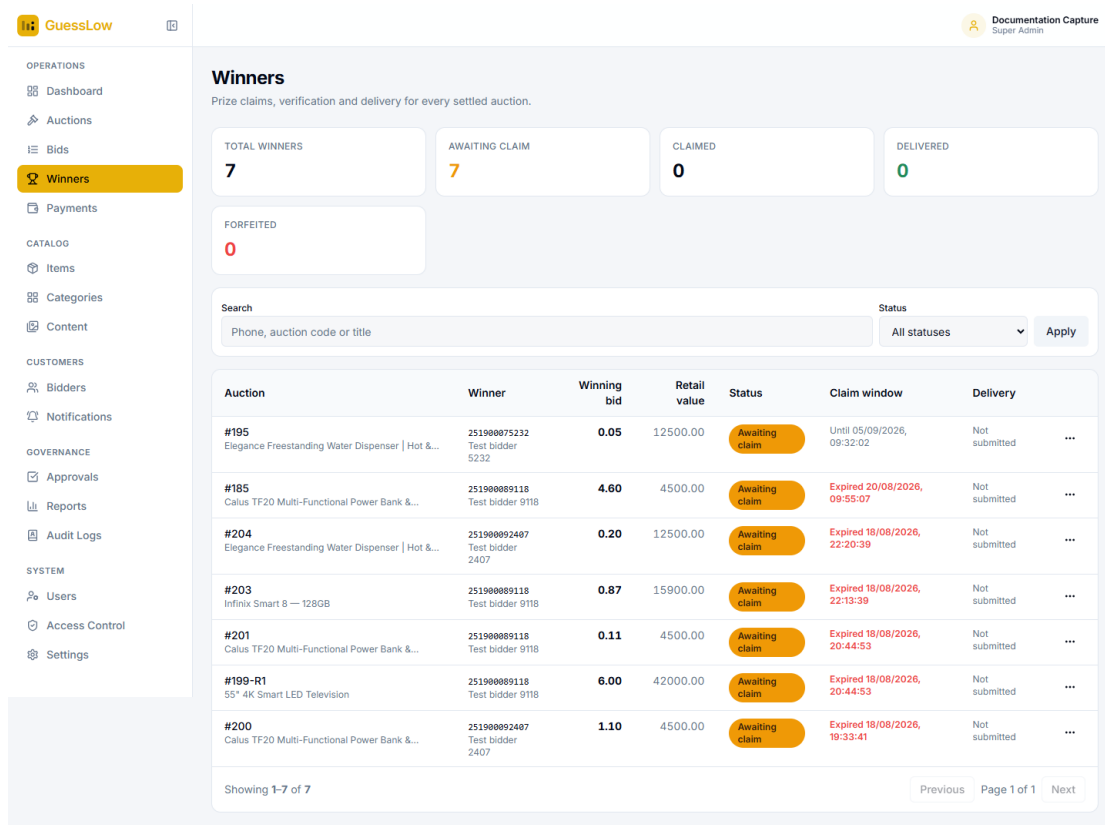

Figure 5.1: The Bids table. The three live bids at the top are masked and marked "Not settled"; every settled bid below shows its amount and result.

This single view shows the confidentiality rule in action. Bids on a running auction appear as dots with the result "Not settled". Bids on a settled auction show the amount, and the result reads Unique with a rank for amounts only one person chose, or Duplicated for amounts two or more people chose — which is exactly why those bids lost.

Filter by customer phone number or by status and select Apply. The tiles above count the matching bids and the fees within that selection. The # column is the customer's own bid number on that auction — their first, second, third and so on.

6. Winners

The Winners module carries prize claims from announcement through to delivery.

Winners
Prize claims, verification and delivery for every settled auction.

TOTAL WINNERS: 7 | AWAITING CLAIM: 7 | CLAIMED: 0 | DELIVERED: 0 | FORFEITED: 0

Showing 1-7 of 7 | Previous | Page 1 of 1 | Next

Figure 6.1: The Winners module. Claim windows that have passed are shown in red.

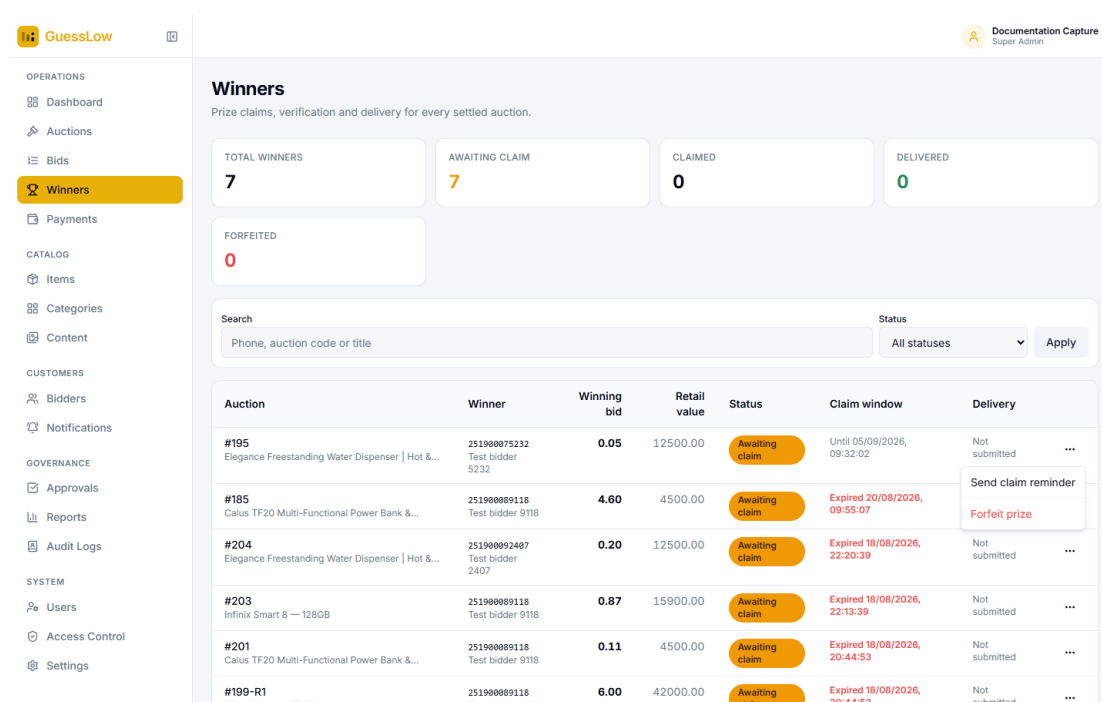

The tiles count total winners, those awaiting a claim, those claimed, delivered and forfeited. The table lists each winner with the auction, the winning bid, the retail value of the prize, the claim status, the claim window and the delivery state.

6.1 The Claim Lifecycle

Status	Meaning	What you do
Awaiting claim	The winner has been notified and the claim window is open.	Wait, or send a reminder.
Claimed	The winner has submitted their claim and delivery details.	Verify their identity and details.

Status	Meaning	What you do
Verified	The claim has been checked and accepted.	Arrange delivery and record it.
Fulfilled	The prize has been delivered.	Nothing further.
Forfeited	The claim window closed with no claim.	Optionally promote the runner-up.

6.2 Acting on a Winner

Winners
Prize claims, verification and delivery for every settled auction.

TOTAL WINNERS: 7 | AWAITING CLAIM: 7 | CLAIMED: 0 | DELIVERED: 0 | FORFEITED: 0

Menu for row #195: Send claim reminder, Forfeit prize

Figure 6.2: The menu on each row carries the actions available at that stage.

1. Find the winner in the table, filtering by status or searching by phone number, auction code or title.
2. Open the menu at the end of the row.
3. Choose the action — for a winner still awaiting a claim, that is Send claim reminder or Forfeit prize.

7. Payments

Payments is where bid service fees collected through the super-app wallet are reconciled.

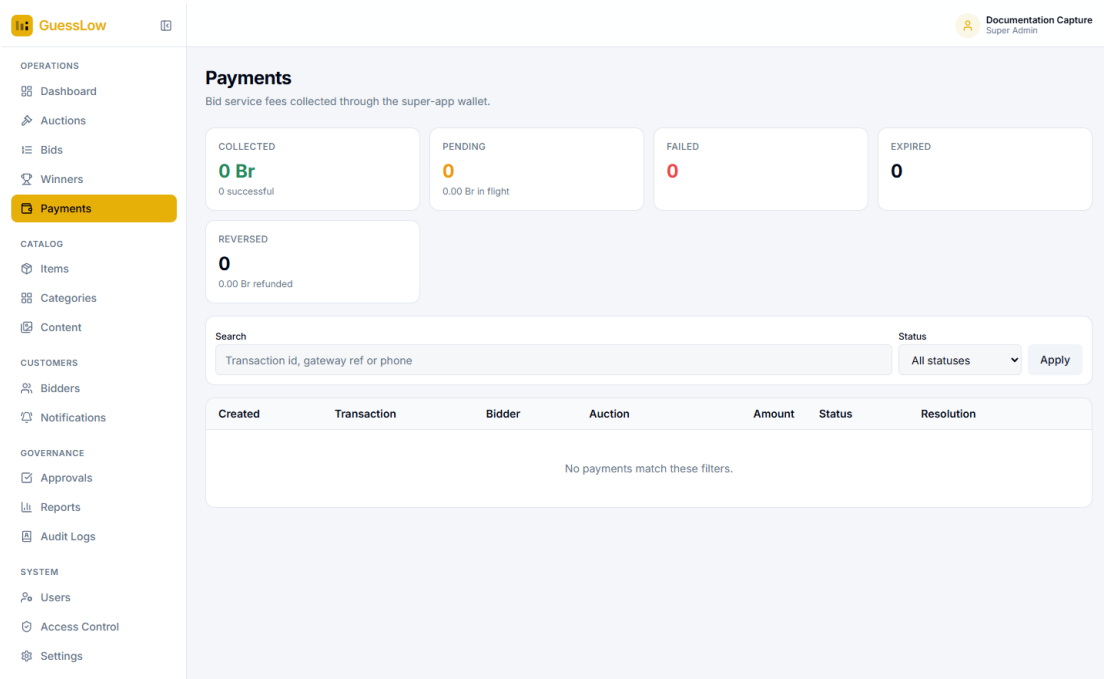

Figure 7.1: The Payments module. The table is empty here because every bid in this environment was placed in a test session, which collects no fee.

The tiles count collected, pending, failed, expired and reversed transactions, each with its value. Search by transaction reference or phone number, and filter by status.

7.1 How Fee Collection Works

When a customer places a bid, the bid is recorded and a payment request is sent to the super-app wallet. The bid does not count until the fee is confirmed. Three safeguards are worth knowing about:

Safeguard	What it prevents
Repeat protection	Payment gateways retry. Confirming a bid that is already active does nothing further, so a customer is never counted twice.
Late payments	If a fee arrives after its bid was cancelled because the auction had closed, the transaction is marked Reversed and flagged for refund rather than quietly kept.

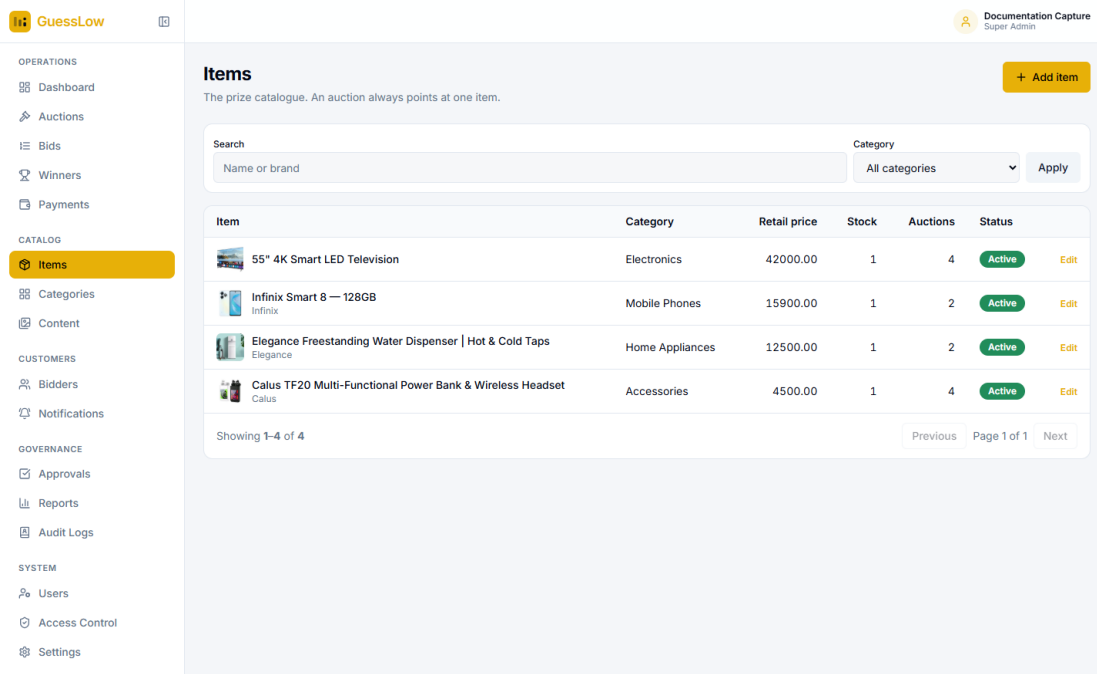

Safeguard	What it prevents
Timeouts	Bids left waiting for payment beyond the timeout set under Settings are cancelled automatically.

7.2 Resolving a Transaction

Staff whose role includes the approve right can confirm, fail or refund a transaction by hand from this page. Every such action is recorded in the audit log against your name.

8. Items and Categories

Items are the prizes. Categories are how customers browse them.

Items

The prize catalogue. An auction always points at one item.

[+ Add Item](#)

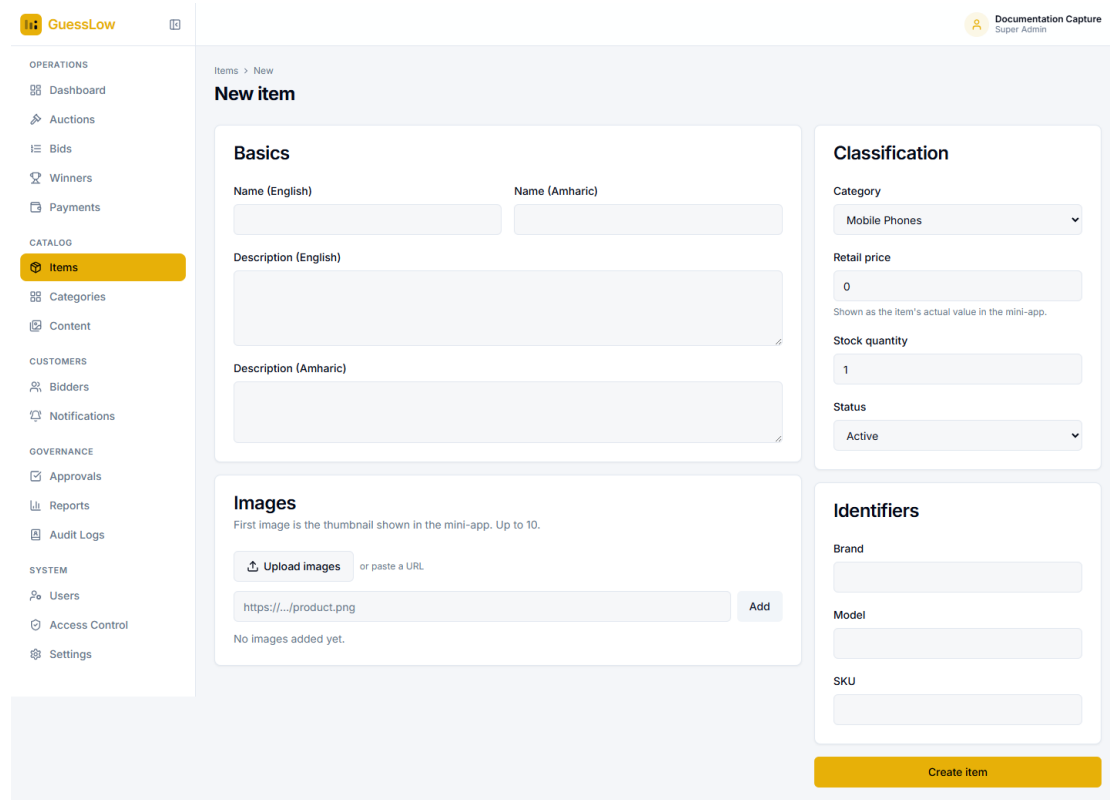

Search: Category: All categories [Apply](#)

Item	Category	Retail price	Stock	Auctions	Status
 55" 4K Smart LED Television	Electronics	42000.00	1	4	Active Edit
 Infinix Smart 8 — 128GB	Mobile Phones	15900.00	1	2	Active Edit
 Elegance Freestanding Water Dispenser Hot & Cold Taps	Home Appliances	12500.00	1	2	Active Edit
 Calus TF20 Multi-Functional Power Bank & Wireless Headset	Accessories	4500.00	1	4	Active Edit

Showing 1-4 of 4 [Previous](#) [Page 1 of 1](#) [Next](#)

Figure 8.1: The prize catalogue.

8.1 Adding an Item

The screenshot shows the 'New item' form in the GuessLow application. The form is divided into several sections:

- Basics:** Includes fields for 'Name (English)', 'Name (Amharic)', 'Description (English)', and 'Description (Amharic)'.
- Classification:** Includes a 'Category' dropdown (set to 'Mobile Phones'), 'Retail price' (0), 'Stock quantity' (1), and 'Status' (Active).
- Images:** Includes an 'Upload images' button and a text input for a URL (https://.../product.png). Below the input, it says 'No images added yet.'
- Identifiers:** Includes fields for 'Brand', 'Model', and 'SKU'.

A 'Create item' button is located at the bottom right of the form.

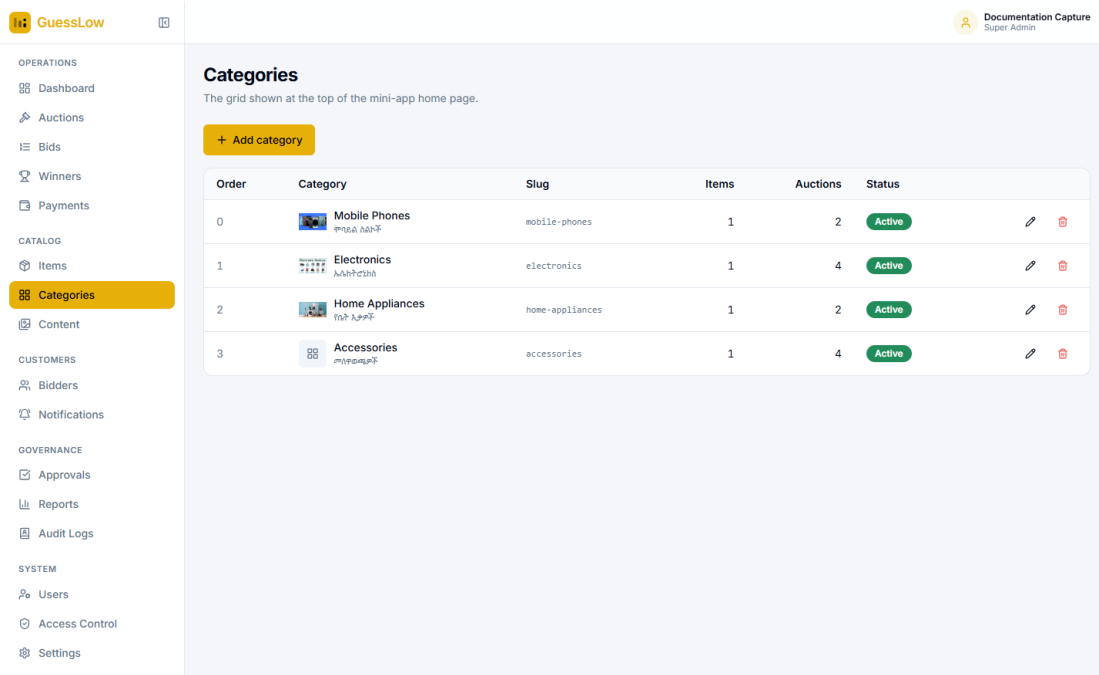

Figure 8.2: The New item form.

1. Go to Items and select New item.
2. Under Basics, enter the name and description in English and Amharic.
3. Under Images, add up to ten pictures. The first is the thumbnail customers see. Use Upload images for a file from your computer, or paste a web address and select Add.
4. Under Classification, choose the category, enter the retail price, the stock quantity, and whether the item is active.
5. Under Identifiers, enter the brand, model and stock code.
6. Select Create item.

The retail price is shown to customers as the item's value, and is what the reports measure the prize cost against.

Items are deactivated, not deleted. An item still referenced by an auction cannot be deleted. Deactivate it instead, so past auction records stay intact.

3	 Accessories ሞባይል ሳኒቶሪያ	accessories	1	4	Active

Figure 8.3: Categories — the top-level grouping customers browse by.

8.3 Uploading Pictures

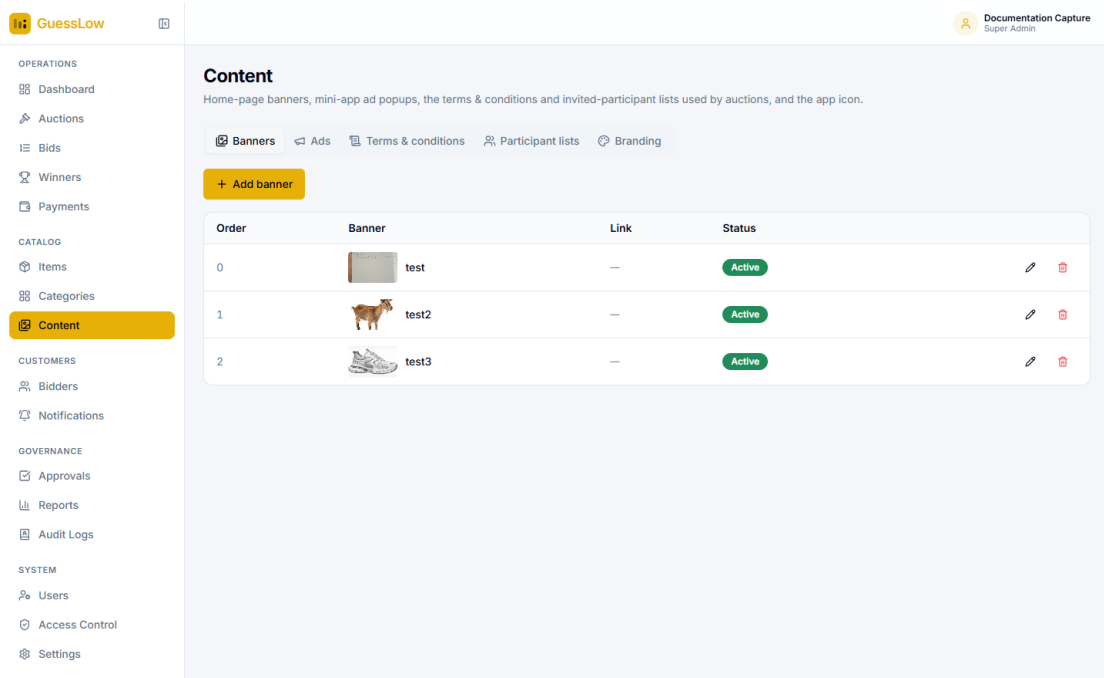

Item photographs, category artwork and home banners all accept a file from your computer — drag it onto the drop area or use the picker — with the option of pasting a web address instead.

- Files may be up to 5 MB.
- PNG, JPEG, WebP, GIF and AVIF pictures are accepted.
- SVG files are refused, because they can carry program code.
- Every upload is recorded in the audit log.

9. Content

Content holds everything customers read in the mini-app. It is one page with five tabs, and a role can be given some tabs and not others.

9.1 Banners

GuessLow

Content
Home-page banners, mini-app ad popups, the terms & conditions and invited-participant lists used by auctions, and the app icon.

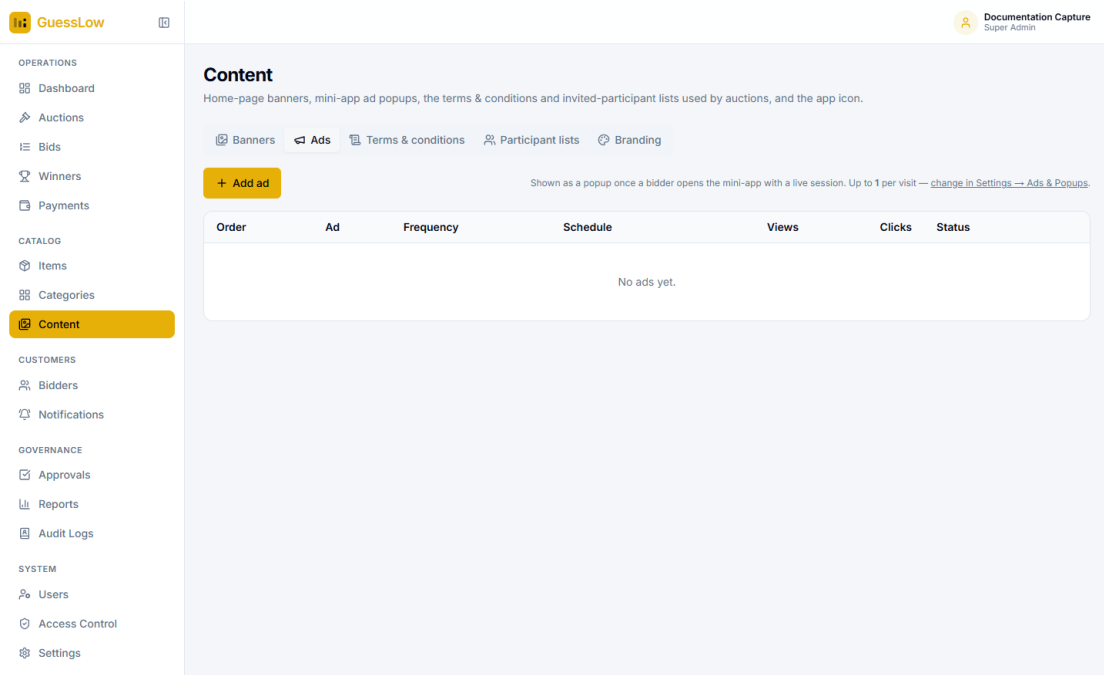

Banners | Ads | Terms & conditions | Participant lists | Branding

[+ Add banner](#)

Order	Banner	Link	Status
0	 test	—	Active
1	 test2	—	Active
2	 test3	—	Active

Figure 9.1: Banners — the promotional carousel on the mini-app home screen.

9.2 Ads

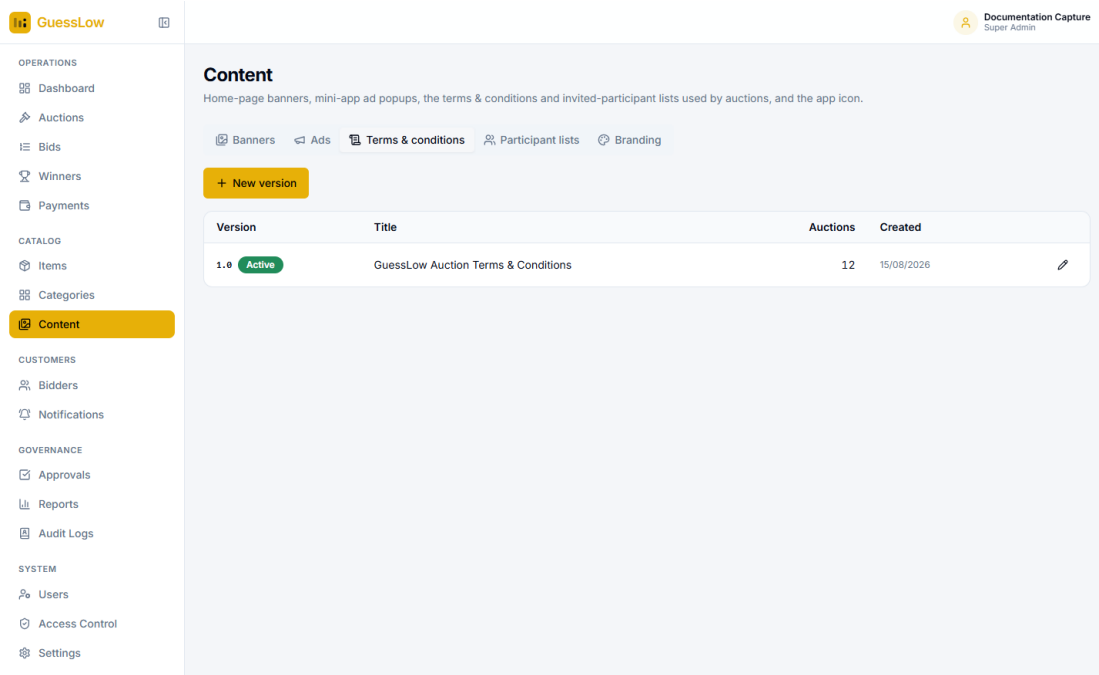

The screenshot shows the GuessLow Admin Panel interface. On the left is a sidebar menu with categories: OPERATIONS (Dashboard, Auctions, Bids, Winners, Payments), CATALOG (Items, Categories), Content (highlighted), CUSTOMERS (Bidders, Notifications), GOVERNANCE (Approvals, Reports, Audit Logs), and SYSTEM (Users, Access Control, Settings). The main content area is titled 'Content' and includes a subtitle: 'Home-page banners, mini-app ad popups, the terms & conditions and invited-participant lists used by auctions, and the app icon.' Below this are tabs for Banners, Ads (selected), Terms & conditions, Participant lists, and Branding. An '+ Add ad' button is visible. A table with columns Order, Ad, Frequency, Schedule, Views, Clicks, and Status is shown, containing the message 'No ads yet.' A user profile 'Documentation Capture Super Admin' is in the top right corner.

Figure 9.2: Ads — a popup shown when a customer opens the mini-app.

Each ad records how many times it was viewed and how often it was tapped. How frequently one appears, how many per visit and the delay before it shows are set under Settings → Ads & Popups.

9.3 Terms and Conditions

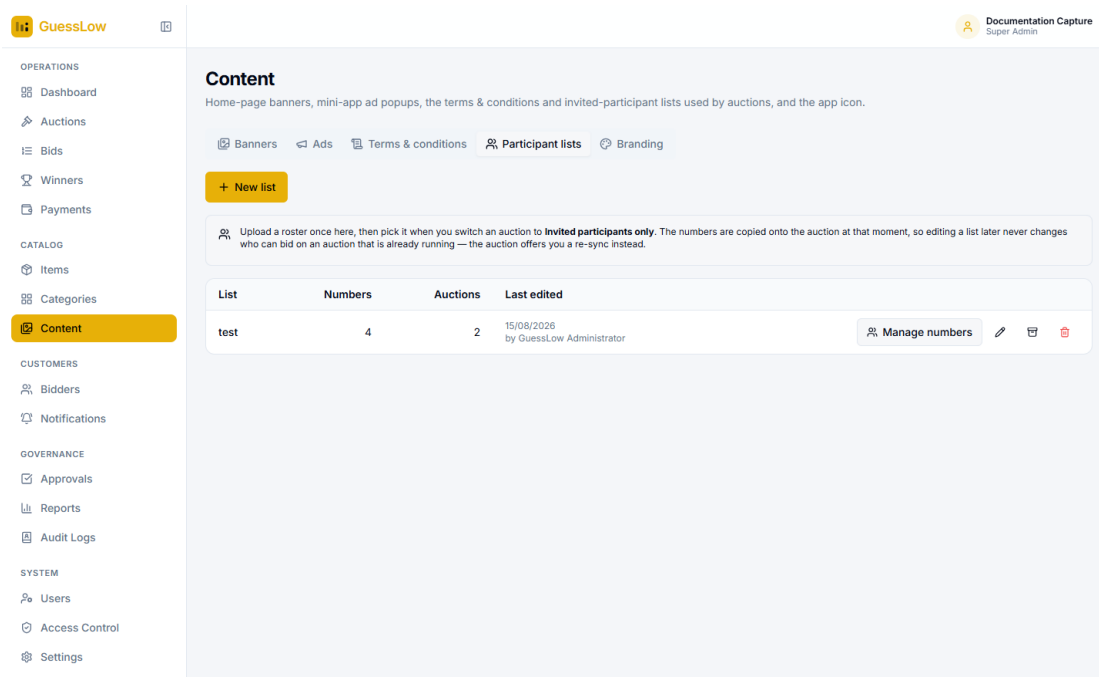

The screenshot shows the GuessLow admin interface. The left sidebar contains various menu items categorized under OPERATIONS, CATALOG, CUSTOMERS, GOVERNANCE, and SYSTEM. The 'Content' menu item is highlighted. The main area shows the 'Content' section with a sub-header 'Home-page banners, mini-app ad popups, the terms & conditions and invited-participant lists used by auctions, and the app icon.' Below this, there are tabs for Banners, Ads, Terms & conditions, Participant lists, and Branding. The 'Terms & conditions' tab is active, showing a table with columns: Version, Title, Auctions, and Created. A '+ New version' button is located above the table.

Version	Title	Auctions	Created
1.0 Active	GuessLow Auction Terms & Conditions	12	15/08/2026

Figure 9.3: Terms and conditions, kept as numbered versions.

Terms are versioned for a reason. Each auction is pinned to the version that applied when it was created, so the terms a customer accepted are the terms on record. Publishing a new version never changes what was agreed on a past auction.

9.4 Participant Lists

GuessLow Documentation Capture Super Admin

Content
Home-page banners, mini-app ad popups, the terms & conditions and invited-participant lists used by auctions, and the app icon.

Banners Ads Terms & conditions **Participant lists** Branding

[+ New list](#)

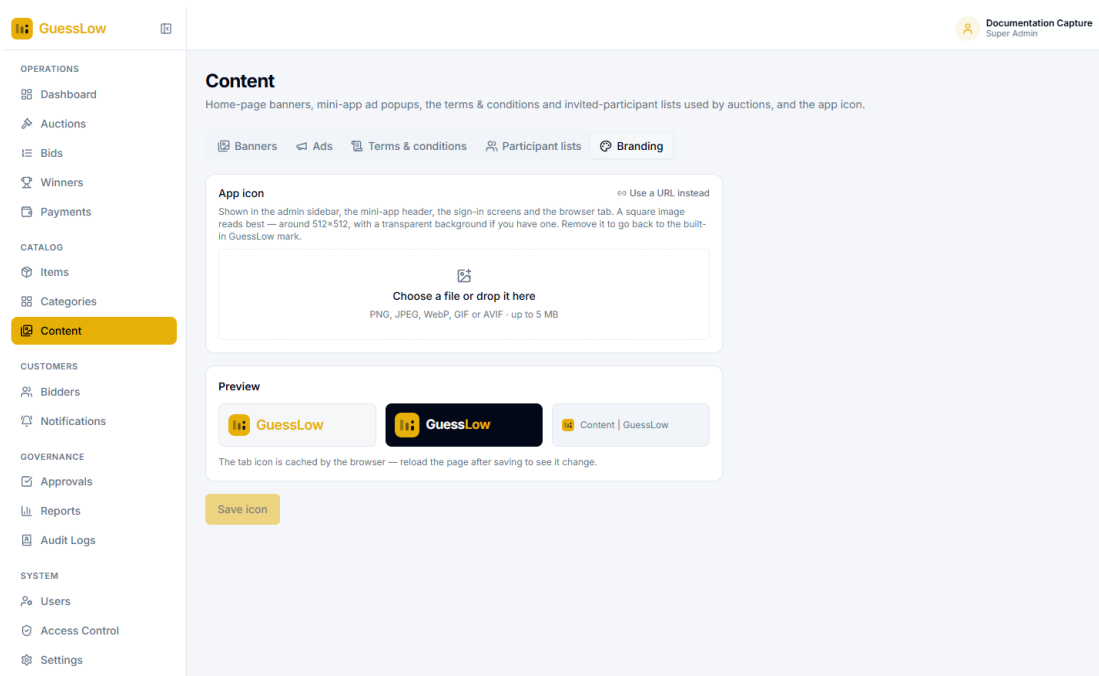

Upload a roster once here, then pick it when you switch an auction to **invited participants only**. The numbers are copied onto the auction at that moment, so editing a list later never changes who can bid on an auction that is already running — the auction offers you a re-sync instead.

Figure 10.2: A customer's record: their totals, every bid they have placed, and every prize they have won.

The tiles give confirmed bids, fees paid, wins and the language they chose. Recent bids lists every bid with its auction, amount, status and time — under the same rule as everywhere else, so amounts on running auctions stay hidden. Wins lists each prize with its claim state.

10.1 Suspending or Blocking an Account

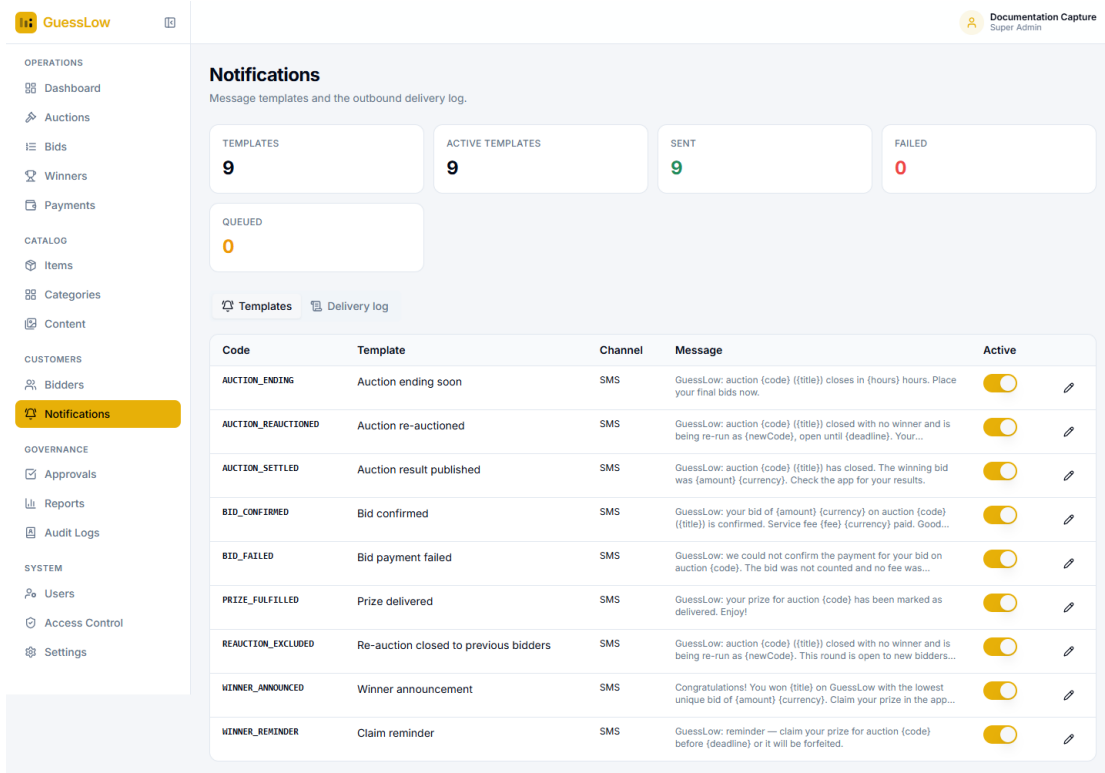

1. Open the customer's record from the Bidders list.
2. In the Account moderation panel, choose Active, Suspended or Blocked.
3. Select Apply.

Moderation is not retrospective. Suspended and blocked accounts cannot place new bids, but bids they have already paid for are unaffected. Every moderation action records who made it.

11. Notifications

GuessLow sends customers an SMS at each important moment. The Notifications module holds the message templates and the record of what was sent.

11.1 Message Templates

Notifications
Message templates and the outbound delivery log.

Figure 11.1: The nine message templates, each with its text and an Active switch.

Each row shows the template, the channel, the message and whether it is active. Select the pencil to edit it in English and Amharic. Messages are built from placeholders such as the auction code, the title, the amount and the deadline, which the platform fills in when it sends. Switching a template off stops that message without deleting it.

Message	Sent when
Bid confirmed	A customer's fee is collected and their bid becomes active.
Bid payment failed	A fee could not be collected, so the bid was not counted.

Message	Sent when
Auction ending soon	An auction is close to its end time.
Auction result published	An auction has been settled.
Winner announcement	A customer has won and the claim window has opened.
Claim reminder	A claim window is running out.
Prize delivered	A prize has been handed over.
Auction re-auctioned	A new round has opened, with the free bids carried into it.
Re-auction closed to previous bidders	A new round has opened that the recipient may not take part in.

Figure 11.2: The delivery log — what was sent, to whom, and whether it arrived.

If messages are not arriving. Until the SMS provider is configured, messages are recorded here but not actually sent. If entries appear in this log, the templates and triggers are working and only the sending service is missing.

12. Approvals

Some changes are important enough to need a second pair of eyes. When maker-checker is switched on for an action, carrying it out creates a request here instead of taking effect immediately.

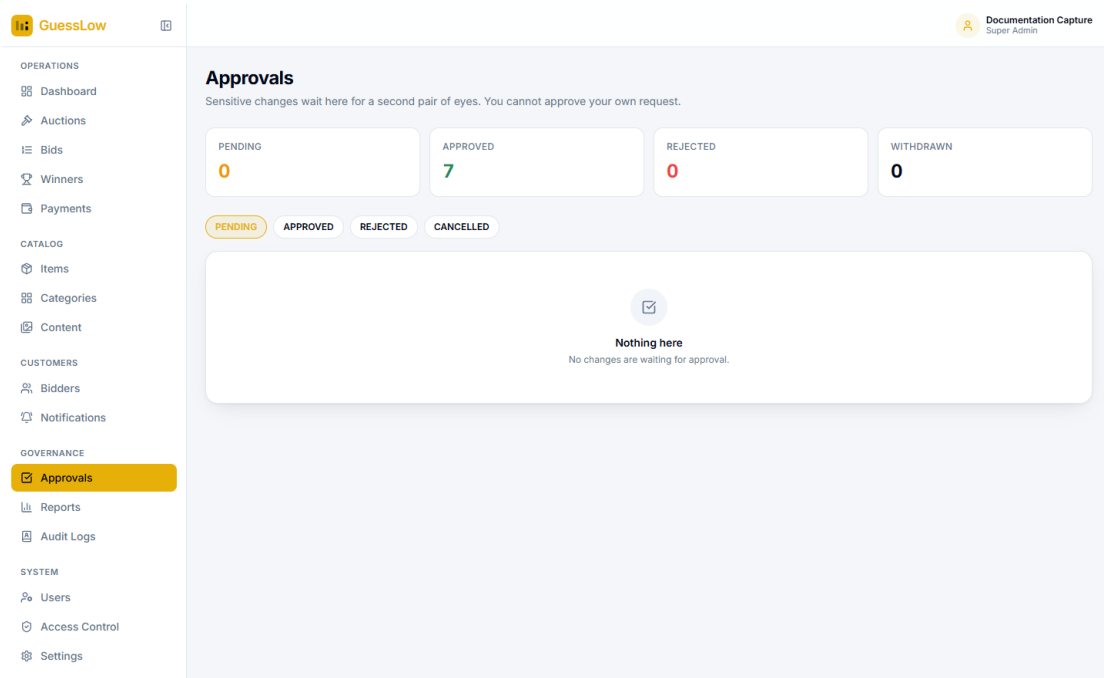

Figure 12.1: The approvals queue, with nothing currently waiting.

1. Open Approvals and select the Pending list.
2. Open the request and review the comparison showing exactly which fields would change.
3. Select Approve to apply the change, or Reject to decline it.

You cannot approve your own request. The approve right is a second pair of eyes, and the platform enforces that literally.

Maker-checker can be switched on independently for publishing auctions, changing sensitive settings, and settling auctions. See Settings → Security & Governance.

13. Reports

Reports shows what the platform earned against what it gave away, over a date range you choose.

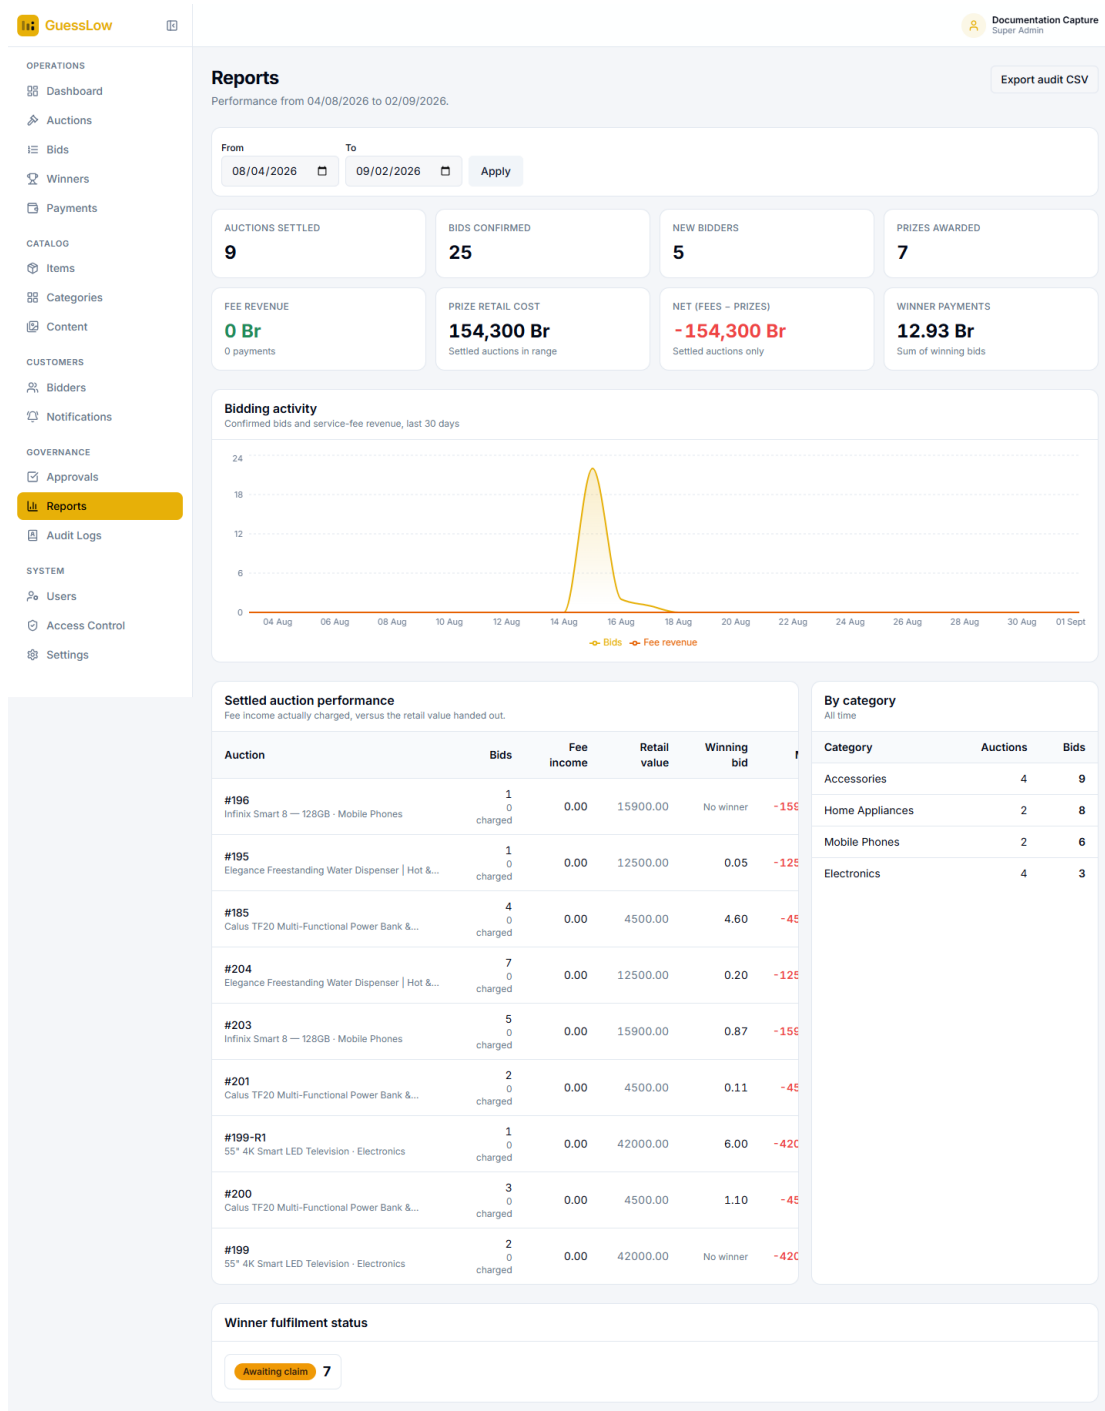

Figure 13.1: The Reports module. Fee revenue reads zero here because every bid in this environment was placed in a test session.

1. Set the From and To dates.

2. Select Apply. Everything below responds.
3. Select Export audit CSV to take the figures away as a spreadsheet.

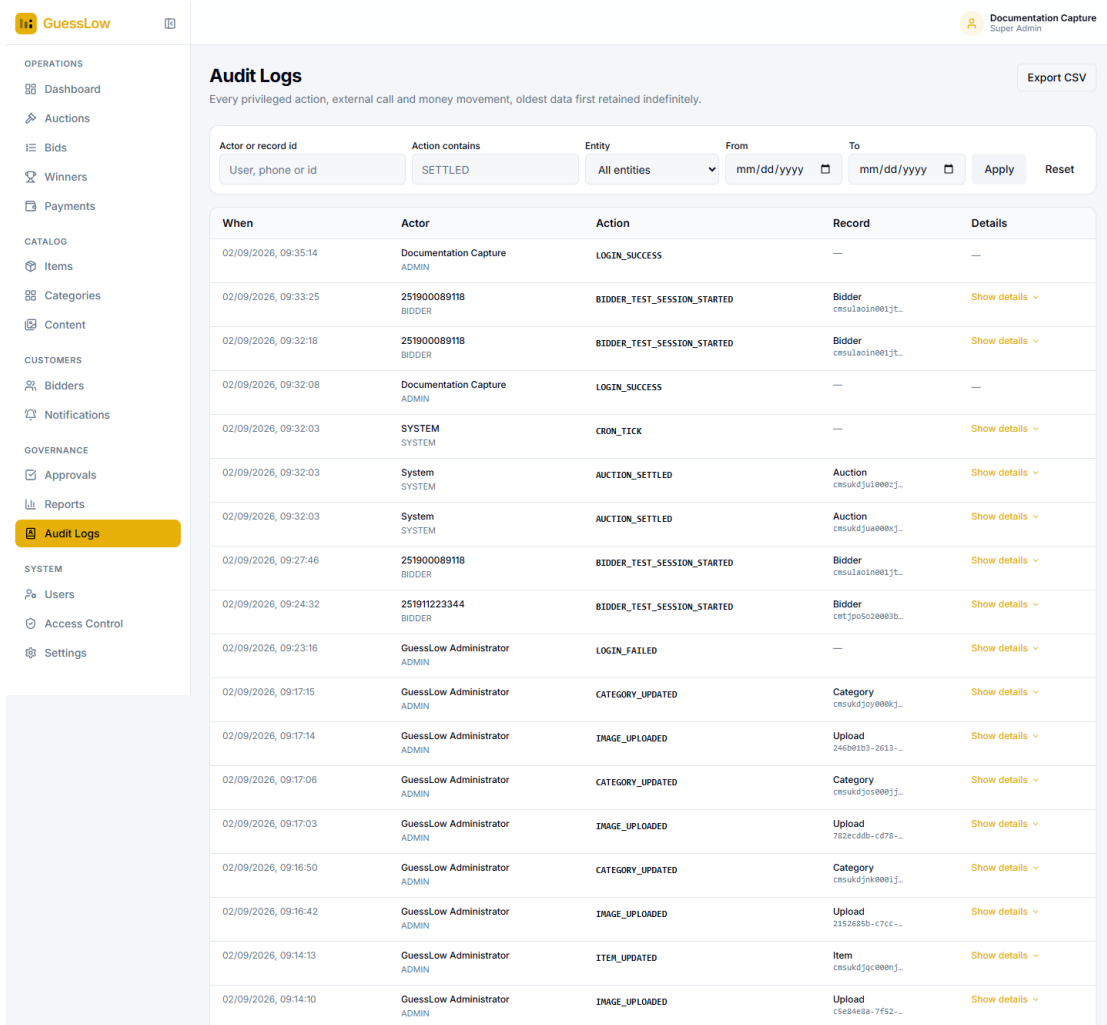

Figure	Meaning
Auctions settled	Auctions whose result was published within the range.
Bids confirmed	Bids whose fee was collected.
New bidders	Customers who joined within the range.
Prizes awarded	Winners produced.
Fee revenue	Service fee income actually charged.
Prize retail cost	Retail value of the prizes handed out.
Net (fees – prizes)	The margin. A red figure means the prizes cost more than the fees brought in.
Winner payments	The sum of the winning bids themselves.

Settled auction performance gives the per-auction detail: bids placed and how many were charged, fee income, the prize's retail value, the winning bid and the margin. Auctions that produced no winner are marked accordingly. By category aggregates auctions and bids per category, and Winner fulfilment status counts winners by claim stage.

Read this page together with the Sanity check panel on the auction form. The two are the before and after of the same question — whether an auction's economics work.

14. Audit Logs

Every privileged action, external call and movement of money is recorded and kept.

Audit Logs
Every privileged action, external call and money movement, oldest data first retained indefinitely.

Export CSV

Figure 14.1: The audit log, with filters for who acted, what they did, on what, and when.

Filter by the person or record involved, by action — the Action contains box takes a fragment such as "SETTLED" — by record type, and by date range. Select Show details to expand a row, and Export CSV to take the filtered set away.

Entries cover staff sign-ins and failures, password changes, every catalogue and content edit, picture uploads, bid placement and confirmation, settlement, and automatic maintenance runs.

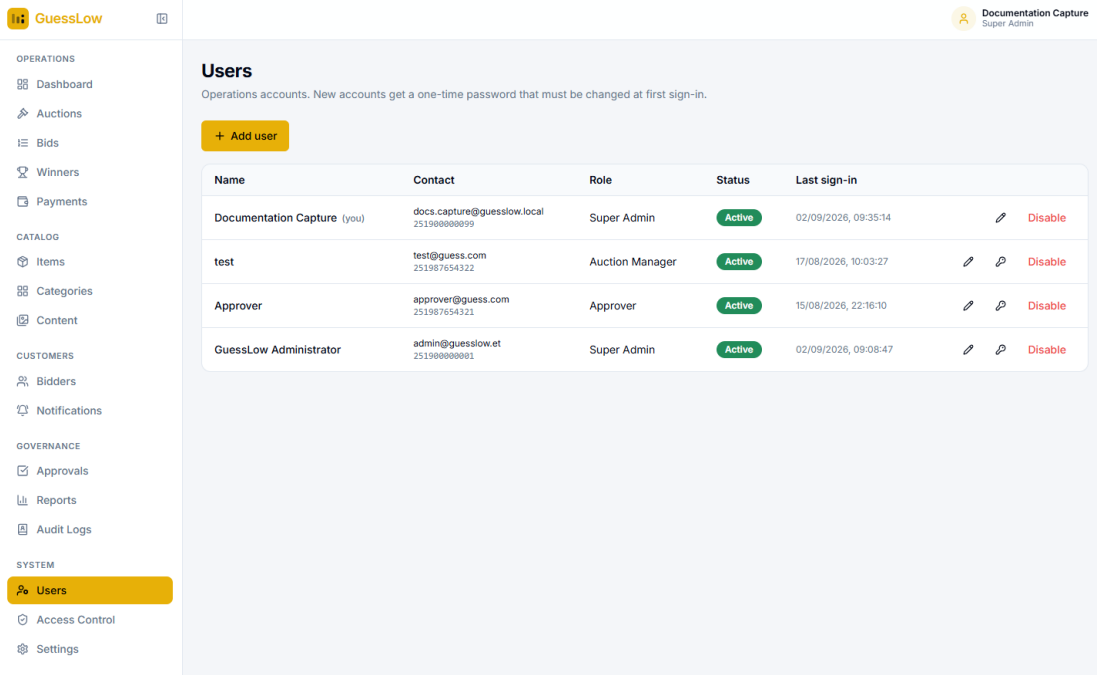

Bid amounts are deliberately absent. The audit log can be read while an auction is still running, so recording bid amounts here would place the live distribution one table away from people who must not have it. The bid record itself is the record, and the audit entry points at it.

The audit log is readable only by the Super Admin, Auditor and Compliance roles.

15. Managing Staff Accounts

Users and Access Control are available to the Super Admin role only.

15.1 Users

GuessLow

Users

Operations accounts. New accounts get a one-time password that must be changed at first sign-in.

[+ Add user](#)

Name	Contact	Role	Status	Last sign-in	
Documentation Capture (you)	docs.capture@guesslow.local 251980000099	Super Admin	Active	02/09/2026, 09:35:14	Disable
test	test@guess.com 251987654322	Auction Manager	Active	17/08/2026, 10:03:27	Edit Reset Disable
Approver	approver@guess.com 251987654321	Approver	Active	15/08/2026, 22:16:10	Edit Reset Disable
GuessLow Administrator	admin@guesslow.et 251980000001	Super Admin	Active	02/09/2026, 09:08:47	Edit Reset Disable

Figure 15.1: Console accounts, with their role, status and last sign-in.

Each row carries three actions: edit the account, issue a one-time password, and disable it. Your own row is marked and cannot be password-reset from here — use Change password instead.

Creating an account

1. Go to Users and select Add user.
2. Enter the person's full name, work email address and phone number.
3. Assign a role.
4. Save. A one-time password is issued, which the account holder must change at first sign-in.

Removing access

Select Disable on the person's row. This takes effect immediately — permissions are read afresh on every request, so access does not continue until their session expires.

You cannot lock yourself out. The last active Super Admin cannot be demoted, disabled or deleted. The platform refuses.

15.2 Access Control

A role is a grid of rights across the console. The rights are:

Right	What it allows
Read	Opening the module. Without it, the module does not appear in the menu at all.
Create	Adding new records.
Update	Changing existing records.
Delete	Removing records.
Approve	The second pair of eyes: settling auctions, deciding pending changes, and confirming payments by hand.

GuessLow Documentation Capture Super Admin

Access Control
Roles define which modules a user can open and what they may do there. Super Admin always has full access.

[+ New role](#) [Approver](#) [Save permissions](#)

Module	Read	Create	Update	Delete	Approve	All
OPERATIONS						
Dashboard	☒	☐	☐	☐	☐	☐
Auctions	☒	☐	☐	☐	☒	☐
Bids	☒	☐	☐	☐	☐	☐
Winners	☒	☐	☒	☐	☒	☐
Payments	☒	☐	☒	☐	☒	☐
CATALOG						
Items	☐	☐	☐	☐	☐	☐
Categories	☐	☐	☐	☐	☐	☐
> Content 0/5 tabs	☐	☐	☐	☐	☐	☐

SYSTEM						
Users	☐	☐	☐	☐	☐	☐
Access Control	☐	☐	☐	☐	☐	☐
Settings	☒	☐	☐	☐	☐	☐

Read opens the module. Approve is the second-pair-of-eyes right: setting auctions, deciding pending changes and confirming payments manually. Rows with a tabs count expand: ticking the module applies to every tab under it, and a dashed box means only some of them have it. A tab with nothing ticked is hidden from that page entirely.

Figure 15.2: The role permission grid.

Changing what a role can do

1. Go to Access Control and select the role on the left.
2. Tick or clear the rights you want, module by module.
3. Expand a row that shows a tab count — Content has five tabs and Notifications has two — to grant individual tabs.
4. Select Save permissions.

Ticking a module applies to every tab beneath it. A dashed box means only some of the tabs are granted. A tab with nothing ticked is hidden from that page entirely. Changes take effect immediately.

The roles supplied with the platform

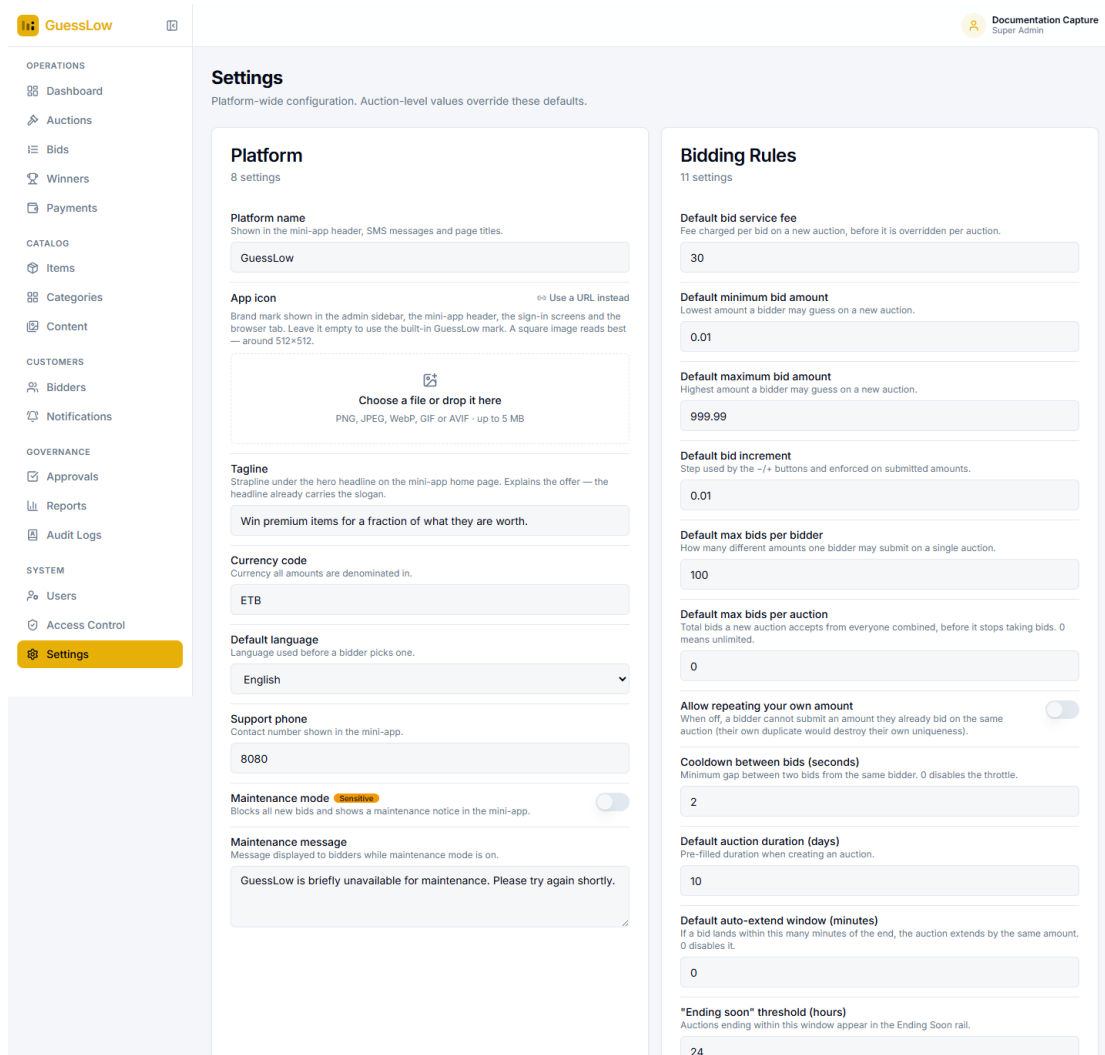

Role	Intended for
Super Admin	Full access. The only role that can reach Users and Access Control.

Role	Intended for
Auction Manager	Running the catalogue and the auction lifecycle.
Approver	The second pair of eyes on settlement, pending changes and manual payment confirmation.
Finance	Payments and reports.
Support	Customer-facing work: accounts, claims and questions.
Auditor	Read-only access, including the audit log.

Roles can be edited, and new ones created with New role.

16. Settings

Settings holds the platform-wide configuration. Every control carries its own explanation, so the page documents itself. Values set on an individual auction always override these defaults — settings only supply the starting point.

GuessLow Documentation Capture Super Admin

Settings
Platform-wide configuration. Auction-level values override these defaults.

Platform
8 settings

Platform name
Shown in the mini-app header, SMS messages and page titles.
GuessLow

App icon
Brand mark shown in the admin sidebar, the mini-app header, the sign-in screens and the browser tab. Leave it empty to use the built-in GuessLow mark. A square image reads best — around 512x512.
Choose a file or drop it here
PNG, JPEG, WebP, GIF or AVIF - up to 5 MB

Tagline
Strapline under the hero headline on the mini-app home page. Explains the offer — the headline already carries the slogan.
Win premium items for a fraction of what they are worth.

Currency code
Currency all amounts are denominated in.
ETB

Default language
Language used before a bidder picks one.
English

Support phone
Contact number shown in the mini-app.
8080

Maintenance mode Sensitive
Blocks all new bids and shows a maintenance notice in the mini-app.

Maintenance message
Message displayed to bidders while maintenance mode is on.
GuessLow is briefly unavailable for maintenance. Please try again shortly.

Bidding Rules
11 settings

Default bid service fee
Fee charged per bid on a new auction, before it is overridden per auction.
30

Default minimum bid amount
Lowest amount a bidder may guess on a new auction.
0.01

Default maximum bid amount
Highest amount a bidder may guess on a new auction.
999.99

Default bid increment
Step used by the +/- buttons and enforced on submitted amounts.
0.01

Default max bids per bidder
How many different amounts one bidder may submit on a single auction.
100

Default max bids per auction
Total bids a new auction accepts from everyone combined, before it stops taking bids. 0 means unlimited.
0

Allow repeating your own amount
When off, a bidder cannot submit an amount they already bid on the same auction (their own duplicate would destroy their own uniqueness).
☐

Cooldown between bids (seconds)
Minimum gap between two bids from the same bidder. 0 disables the throttle.
2

Default auction duration (days)
Pre-filled duration when creating an auction.
10

Default auto-extend window (minutes)
If a bid lands within this many minutes of the end, the auction extends by the same amount. 0 disables it.
0

"Ending soon" threshold (hours)
Auctions ending within this window appear in the Ending Soon rail.
24

Figure 16.1: Settings, grouped by subject. Controls marked Sensitive route through approval when maker-checker is switched on.

Group	What it controls
Platform	Platform name, app icon, tagline, currency, default language, support number, and maintenance mode with its customer-facing message.
Bidding Rules	Default fee, bid range, increment, per-customer and per-auction limits, whether an amount may be repeated, the pause

Group	What it controls
	between bids, default duration, auto-extend and the ending-soon threshold.
Bid Visibility	When bid status becomes visible, and whether the list of bid amounts is published after settlement.
Winners & Claims	Automatic settlement, the grace period before it runs, the length of the claim window, how many runner-ups to record, and whether the winner's masked number is shown publicly.
Re-Auction	Whether rounds are created and published automatically, the round limit, duration, start delay, who may join, and the minimum bids for a valid result.
Payments	Whether bid fees are charged at all, the merchant details, the payment timeout and refund flagging.
Ads & Popups	Whether ad popups appear, how many per visit, and the delay before one shows.
Notifications	The master switch for outbound messages, and a switch per event.
Security & Governance	Failed sign-in limit, lockout duration, and the maker-checker switches for publishing, settings and settlement.

Two settings deserve particular care. Maintenance mode blocks all new bids and shows customers a notice. Charge bid fees, when switched off, accepts bids without collecting any payment at all — intended for pilots and testing, never for live operation.

16.1 Keeping Auctions Moving

A background routine advances auctions from scheduled to live to ended, cancels unpaid bids that have timed out, settles ended auctions after the grace period, opens re-auction rounds, notifies winners and sends ending-soon reminders.

This routine is driven in three overlapping ways, so that a missed run is never harmful: a scheduled task, a background worker, and the console itself, which

triggers a run whenever an auction page is opened. Awarding a prize never depends on a single one of them.

If an auction has ended but not settled. Check the Awaiting settlement tile on the dashboard, and simply open the auction — that alone triggers a run. If settlement is failing rather than merely waiting, the audit log will carry an entry explaining why.

17. Reference

17.1 Auction Statuses

Status	Meaning
Draft	Created, not visible to customers.
Pending approval	Waiting for approval before publication.
Scheduled	Published; start time not yet reached.
Live	Accepting bids.
Ended	Closed to bids; result not yet published. Amounts stay hidden.
Settled	Result published. Amounts are visible.
Cancelled	Withdrawn.

17.2 Bid Statuses

Status	Meaning
Pending payment	Placed, fee not yet collected. Does not count towards the result.
Active	Fee collected. Counts towards the result.
Failed	The fee could not be collected.
Void	Cancelled — usually a bid that waited too long for payment.
Refunded	The fee has been returned.

17.3 Payment Statuses

Status	Meaning
Pending	Waiting for the wallet.
Success	Collected.
Failed	Declined.

Status	Meaning
Expired	The customer did not approve it in time.
Reversed	Arrived after its bid was cancelled; flagged for refund.

17.4 Winner Statuses

Awaiting claim, Claimed, Verified, Fulfilled, Forfeited and Cancelled. See section 6.1.

17.5 Customer Account Statuses

Active, Suspended and Blocked. Suspended and blocked customers cannot place new bids.

17.6 Common Questions

Situation	What to do
An auction has ended but not settled.	Open the auction — that triggers a settlement run. Check the audit log if it still does not settle.
A bid was placed but is not counted.	It is probably waiting for payment. A bid only counts once its fee is collected. Check Payments for the transaction.
Amounts show as dots in the console.	That is correct while an auction is live or ended. Amounts open once it is settled. Use the Provisional result panel in the meantime.
A customer says they were charged twice.	Check the auction's re-auction chain. Bids carried into a new round are recorded free of charge, so look at which round each fee belongs to.
Messages are not reaching customers.	Check the delivery log. If entries are there, only the sending service is missing.
An auction produced no winner.	Every amount was chosen by more than one person, or too few bids were received. Re-run the auction, or widen the bid range next time.
